Piezo-Acoustic Cryo-Extraction

[THE MECHANICS:]

Solid-state thermoelectric Peltier cooler array combined with ultrasonic acoustic cavitation nozzles that deconstruct fluid cellular walls in 0.4 seconds without thermal degradation or chemical solvents.

The system utilizes closed-loop acoustic resonance feedback to modulate micro-bubble implosion frequencies in real time, synchronizing molecular yield output directly to continuous flow rates.

[UTILITARIAN VALUE:]

Eliminates thermal decomposition in temperature-sensitive biological and beverage compounds, increasing bio-active nutrient retention by 94% with zero chemical residue.

[TARGET ECOSYSTEM:]

Specialty food sciences, botanical pharmaceutical labs, and zero-additive cold extraction facilities.
