SPEC ID       : QLA-BP-000000000101                                RESONANCE     : 9.2 / 10.0 CR
ATTRIBUTED TO : Teenage Engineering Team                           CALIBRATED    : 2026-11-02
NODE ENDPOINT : https://qualia-teal.vercel.app/idea/b0000000-0000-0000-0000-000000000101
```

Sonic Architecture Crypt

[THE MECHANICS:]

A series of limited-edition, milled anodized aluminum hardware modules that function simultaneously as fully playable polyphonic synthesizer voices and zero-trust cryptographic seed-phrase cold wallets.

The physical device utilizes Teenage Engineering's signature mechanical click-encoders and pin-matrix routing. To initialize the wallet, users input an analog frequency sequence via modular patch cables, translating acoustic vibrations directly into cryptographic entropy. The device features no network interface, relying instead on optical data transfer -- flashing Morse-like LED sequences readable only by a companion mobile app when air-gapped from all wireless frequencies.

[UTILITARIAN VALUE:]

This artifact unlocks extreme-margin monetization by capturing two distinct, high-spending demographics: elite electronic musicians and ultra-secure digital asset holders. By bundling high-end synth hardware with impenetrable offline key storage, the product commands a 400% markup over standard audio gear, leveraging the luxury collector market while utilizing minimal internal components beyond premium chassis milling and secure-element microchips.

[TARGET ECOSYSTEM:]

High-net-worth crypto-natives, professional sound designers, and luxury lifestyle gadget collectors operating within secure studio environments.
