Tarp-Registry Ledger

[THE MECHANICS:]

Freitag embeds a passive, unalterable micro-transponder into the raw edge binding of every tarp sheet harvested from European highways. When a bag is cut and stitched, the digital ledger records the exact transport company, route mileage, and logistics history of that specific canvas.

Customers access this provenance via an encrypted Near Field Communication (NFC) tap of the bag's buckle, unlocking a digital passport showing the tarp's previous life hauling cargo across the continent. This infrastructure powers a secondary-market exchange directly inside the Freitag application, where bags trade like limited-edition assets based on the rarity, aesthetic patina, and documented mileage of their original industrial tarps.

[UTILITARIAN VALUE:]

This mechanism captures high-margin aftermarket liquidity by charging a transactional fee on peer-to-peer secondary sales while cementing brand equity through verified authenticity. It transforms wear-and-tear from a durability concern into a quantifiable financial asset, driving primary retail sales by guaranteeing residual value and drastically increasing customer lifetime retention through digital ownership tracking.

[TARGET ECOSYSTEM:]

Urban commuters, circular-economy minimalists, and luxury resale collectors operating within high-density European and Asian metropolitan hubs.
