Nexus Analog Matrix

[THE MECHANICS:]

The Nexus Analog Matrix integrates as a 42HP desktop console and Eurorack companion that bridges Frap Tools discrete analog topology with deterministic digital patch storage. Operating via a zero-latency optocoupler and sealed reed-relay switching matrix, the hardware allows users to route signals dynamically between the Brenso, Falistri, Fumana, and Cunsa modules without audio-path digitization. The internal signal path remains strictly discrete and analog, while patch configurations, modulation routings, and attenuverter offsets are stored via an isolated microcontroller interface. Users recall complex patches instantly through a tactile brass encoder array, decoupling the fluid experimentation of modular synthesis from the friction of manual cable teardown.

[UTILITARIAN VALUE:]

This architecture captures high-margin hardware revenue while driving multi-module ecosystem lock-in, targeting the professional sound designer and elite studio market where workflow velocity and patch recall are paramount. By offering an analog routing hub that preserves pure discrete signal paths while adding digital state management, Frap Tools commands a premium price tier that leverages the existing installed base of complex oscillators and filterbanks. The device shifts
