SPEC ID       : QLA-BP-000000002008                                RESONANCE     : 9.7 / 10.0 CR
ATTRIBUTED TO : Alex Beachum & Loan Verneau                        CALIBRATED    : 2026-11-07
NODE ENDPOINT : https://qualia-teal.vercel.app/idea/b0000000-0000-0000-0000-000000002008
```

Chronos-Kinetic Orrey Archive

[THE MECHANICS:]

The product is a high-fidelity, desktop-scale Newtonian orrery featuring a magnetically levitated, multi-axis gyroscopic core that mirrors real-time celestial telemetry from the user's localized "Outer Wilds" save state. The chassis is constructed from brushed aerospace-grade titanium, housing a low-latency haptic feedback array that translates orbital gravitational shifts and proximity-based signalscope frequencies into tactile pulses. Embedded within the base is an NFC-integrated slot for physical "Quantum Shard" artifacts; placing a shard triggers a localized firmware update to the physical model, unlocking specific celestial alignment animations and rare acoustic resonance patterns synchronized with in-game archaeological discoveries.

Digital integration is achieved via a dedicated local kernel bridge that bypasses standard game-engine overhead, allowing the orrery to function as a persistent, diegetic time-keeping device even when the game application is closed. The hardware operates on a proprietary low-power mesh protocol, enabling the physical model to track the "loop" state through a light-piped fiber optic display integrated into the orbital rings. When the game's internal clock approaches a terminal event, the orrery's internal lighting shifts from a calm ambient blue to a high-intensity, oscillating solar-flare amber, providing a tangible, physical manifestation of the impending time-loop reset.

[UTILITARIAN VALUE:]

This architectural pivot transforms static IP into a high-margin premium collectible that functions as a functional, aesthetic "living" accessory for the workstation. By decoupling the discovery process from the screen, it incentivizes repeat engagement with the core simulation, driving long-term secondary market value for the physical shards and securing a recurring revenue stream through iterative hardware-linked content drops.

[TARGET ECOSYSTEM:]

High-net-worth enthusiasts of non-linear exploration titles and physical-digital hybrid tabletop collectors.
