Tactile Resonator Spool Box

[THE MECHANICS:]

A tabletop physical acoustic resonator and motorized micro-cassette spool mechanism housed in an oiled solid walnut chassis. An exposed continuous tape loop passes across a variable-speed brushless motor spindle and dual playback heads positioned at micro-adjustable azimuth angles.

Performers touch copper capacitive touch-strips on the wooden casing to induce micro-wow and physical drag directly against the tape transport, sculpting organic tape flutter, tape saturation, and real-time acoustic spring reverb decay through dual high-impedance piezos coupled to the interior soundboard.

[UTILITARIAN VALUE:]

Delivers unrepeatable analog warmth and tactile pitch manipulation for film scoring and game audio without sterile software plugin emulation.

[TARGET ECOSYSTEM:]

Film composers, boutique sound designers, ambient modular artists, tape loop performers.
