Tensor Iteritas // Algebraic Cellular Field Synthesizer

[THE MECHANICS:]

A high-density Eurorack module combining a 32-bit floating-point Wolfram cellular automata field with an algebraic tensor phase matrix and continuous polynomial wavefolder. Rather than static wave tables or linear FM, it computes discrete multi-dimensional cell state transitions in real time, translating cellular collision topologies into explosive metallic transients, unpredictable polyrhythmic ratchets, and self-modulating harmonic sub-clusters without requiring external CV routing.

[UTILITARIAN VALUE:]

Discrete cellular phase collisions, algebraic non-linear folding, and multi-dimensional state tracking generating dense metallic percussion and self-evolving industrial timbres with zero menu-diving.

[TARGET ECOSYSTEM:]

Noise Engineering Versio & Iteritas platform, industrial dark techno modular systems, tactile Eurorack performance, cinematic sound design.
