```

Harmonic Entropy Tactile Matrix & Analog Probability Routers

[THE MECHANICS:]

A standalone battery-powered tactile composer built around weighted resistive pressure strips and hardware noise-diode entropy seeds rather than menu-driven pseudo-random lookup tables. Twelve illuminated channel sliders directly bias Markov transition weights across scale intervals, micro-timing swing, and gate velocity while a dedicated copper capacitive touchplate lets the performer freeze, mutate, or phase-lock evolving polyrhythms in real time. Balanced line outputs, TRS MIDI Type-A, and four 16-bit DAC CV/Gate pairs allow effortless integration between Eurorack rigs and polyphonic desktop synthesizers.

[UTILITARIAN VALUE:]

Captures high-margin standalone desktop demand from live electronic performers who want non-repetitive generative composition with immediate physical tactile memory, bypassing computer DAW scripting entirely.

[TARGET ECOSYSTEM:]

Live modular performers, generative ambient composers, hardware electro-acoustic ensembles, and scoring laboratories.
