Physical Brass-Foil Card Engine & NFC Table-Sync Cartridge

[THE MECHANICS:]

A pocket-sized tactile card-stacking and micro-cartridge anthology where physical letterpress cardstock decks contain passive NTAG215 inlays tucked inside thick laminated cores alongside an open-source USB/Bluetooth puck reader. Placing physical villager, resource, or monster cards onto a desk mat updates deterministic simulation rules in real time on screen while tracking wear, scars, and unlocked crafting recipes inside each physical card EEPROM.

[UTILITARIAN VALUE:]

Converts digital micro-game cult hits into a high-margin collectible tabletop artifact that drives organic word-of-mouth and recurring expansion deck revenue without Steam algorithm dependency.

[TARGET ECOSYSTEM:]

Indie tabletop collectors, boutique game storefronts, Patreon experimental patrons, and tactile simulation fans.
