Self-Hosted Audio Cartridge Dock & Zero-Latency Stage Matrix

[THE MECHANICS:]

A ruggedized stage dock built around hot-swappable anodized aluminum cartridges that combine physical JFET/transformer impedance matching with locked real-time routing snapshots. Each cartridge stores signed deterministic DSP graphs and hardware bias curves, letting artists hand off identical tone rigs between rehearsal rooms and festival stages in seconds without touching a browser UI.

[UTILITARIAN VALUE:]

Creates a recurring physical-digital cartridge ecosystem where touring musicians swap pre-calibrated analog-front-end cartridges and deterministic DSP chains with zero laptop dependency.

[TARGET ECOSYSTEM:]

Touring guitarists, hybrid electronic live acts, FOH sound engineers, and independent DSP plugin creators.
