Modular Bio-Thermal Surf Core & Saltwater Repair Kit

[THE MECHANICS:]

A two-part cold-water surf system pairing a permanent plant-rubber chassis with snap-welded, heat-sealed bio-fleece chest and knee armor cartridges. When salt abrasion or reef contact degrades a high-stress zone, riders swap only the worn panel in five minutes using a marine-grade vulcanizing strip instead of discarding the entire suit.

[UTILITARIAN VALUE:]

Extends wetsuit lifecycle and cuts warranty waste by turning high-wear knee, cuff, and chest panels into user-replaceable locked thermal modules sold as seasonal limited drops.

[TARGET ECOSYSTEM:]

North Atlantic cold-water surfers, coastal expedition photographers, repair-first outdoor communities.
