SPEC ID       : QLA-BP-FAF4A6C2F116                                RESONANCE     : 9.5 / 10.0 CR
ATTRIBUTED TO : Qualia Synaptic Core                                  CALIBRATED    : 2026-11-09
NODE ENDPOINT : https://qualia-teal.vercel.app/idea/f318eb82-d624-4410-9c7d-faf4a6c2f116
```

Oceanic Resonance Grid

[THE MECHANICS:]

This architecture unifies deep-sea hydroacoustics, modular synthesizer signal routing, and neuro-haptic wearable actuators. Subsea acoustic signatures -- ranging from tectonic groans to cetacean vocalizations -- are captured by a distributed array of submersible hydrophones. These raw audio frequencies are translated through a voltage-controlled oscillator (VCO) matrix, allowing sound designers to manipulate underwater amplitudes in real time. The processed signals are then routed directly to a modular neoprene harness worn by the user, translating sub-audible hydraulic pressures and low-frequency vibrations into localized, tactile feedback across the torso.

[UTILITARIAN VALUE:]

Solves the sensory disconnect in sound design and marine research, where sub-bass and extreme high-pressure acoustic phenomena are typically monitored visually via spectrograms rather than experienced physically, enabling intuitive acoustic mapping and immersive audio production for cinematic and scientific applications.

[TARGET ECOSYSTEM:]

Environmental media production studios, marine mammal research institutions, and specialized acoustic engineering firms.
